

## Retrospect Interschutz/Interpolice 2005, Hannover

**DELTA COMPONENTS GmbH**  
reviews a successful participation at the exhibition  
**Interschutz/Interpolice from June 6-11 2005.**

The summary of 1,385 exhibitors and approximately 140,000 visitors:

**„Interschutz/Interpolice 2005 was an absolute success.“**

As “tandem” exhibition the Interschutz (1,235 exhibitors) and Interpolice (150 exhibitors) proved their international authority: a historically grown and established exhibition was enhanced for the challenges of the future.

“We are facing a change of the threats. The safety requirements have changed, the separation of civil defence and civil protection is outdated”, said Federal Minister of the Interior Otto Schilly, who had taken over the patronage for both fairs.

In the context of the Interpolice DELTA COMPONENTS showed in Hall 27 its comprehensive product portfolio within the range mobile computing. Emphasis was laid on PCs for vehicle applications, monitors for flush mounting and vehicle applications, GPS products for satellite navigation, and services.

The displayed motorcycle type BMW RT with integrated DeltaCar PC, which was installed in the DIN radio pit in the cowl attracted a lot of attention. The integrated LCD TFT terminal with TouchScreen surface implemented visualization. Many visitors could convince themselves of the well working man-machine interface, which was shown with the software DeltaSoft for the first time on a two-wheeler. The purpose of exhibiting that two-wheeler was to make aware of the potentials of mobile computing also in extreme environmental conditions. In many discussions it became clear that there are certain fields, where the potentials of mobile navigation and communication are required.

Many visitors had operated the control concept independently, without preceding explanation, which confirmed that the structure and way of prompting and visualization were developed in line with standard usage.

On the next page you will find further photos of the exhibition booth and the exposed exhibits.

At the booth of company Rosenbauer: airport-fire truck Simba HRET of the airport fire brigade Frankfurt/Fraport. In this vehicle 2 DeltaCar PCs are installed for most diverse applications. Rosenbauer integrates the LCD TFT terminals with TouchScreen surface into the instrument panel.

Presentation of the deployment software: navigation, communication, thermal image camera, and visualisation, to name but a few of Honeywell Airport Systems

## Final Consideration

DELTA COMPONENTS experienced the participation in the Interschutz/Interpolice 2005 as very successful. Necessity for mobile computing in most diverse fields was shown clearly. The international visitors were highly interested in the exhibition booth and the exposed exhibits.

DELTA COMPONENTS thanks all visitors for the interest shown and looks forward to strengthen the established contacts further on.
